Abstract not available for EP1933784 (A2)

Abstract of corresponding document: WO2007021184 (A2)

A condom applicator (10) comprises at least one arcuate guiding member (3) for engaging on the outside surface of a condom. The guiding member (3) in use extends adjacent a rolled up part of said condom along at least a part of the circumference of the condom. On at least one end of said guiding member (3) a receiving loop (1a, 1b) is provided for receiving the rolled up part of the condom. The receiving loop (1a, 1b) is open on the underside and extends in use over the rolled up part of the condom.
