New Features – Responsive Web

- **Dateline support**

In this code release, the responsive site implements the Dateline Feature -- at this moment available to VOA sites only but can be enable to other entities on request. This feature allows editor to add a dateline to the articles. When creating/updating an article in Pangea CMS, users will see a field where can be added the appropriate [Dateline](#) text.

On Responsive site the text will be displayed at the beginning of the body text of the article in the format of **DATELINE — Body** copy.

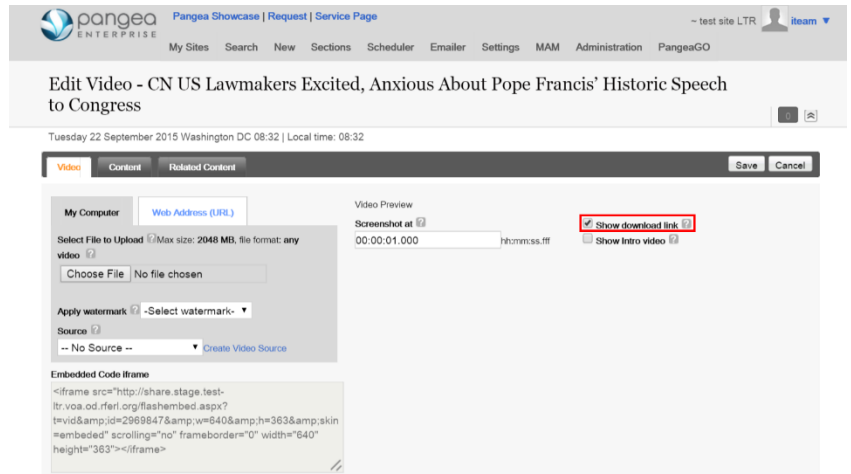

- **Hide download links for Video & Audio**

Since this release, once an audio or video is available on responsive site, the option of download link (Direct Link) will display or hide according to the settings in CMS

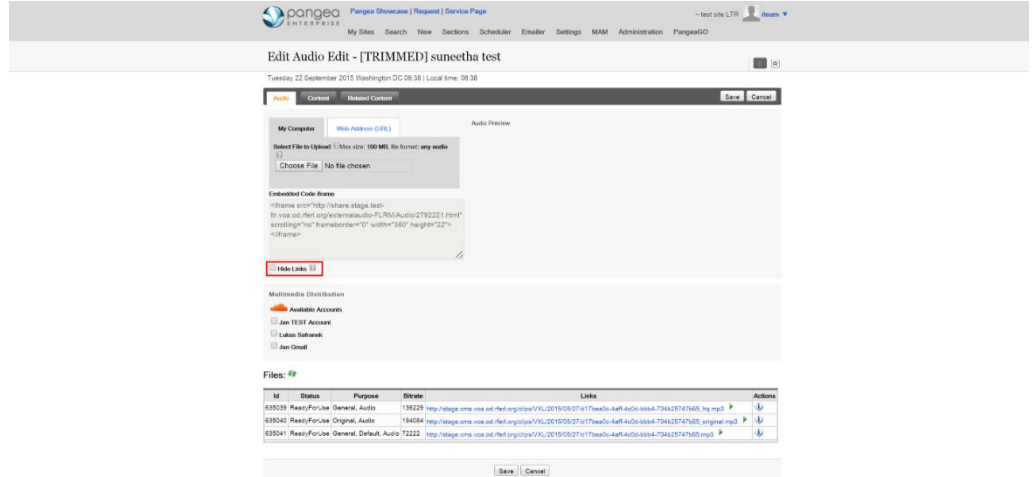

Video Clips:

When uploading videos in CMS, the option **show download link** will be respected by the responsive site, meaning if un -selected the Download (direct link) option will be disable.

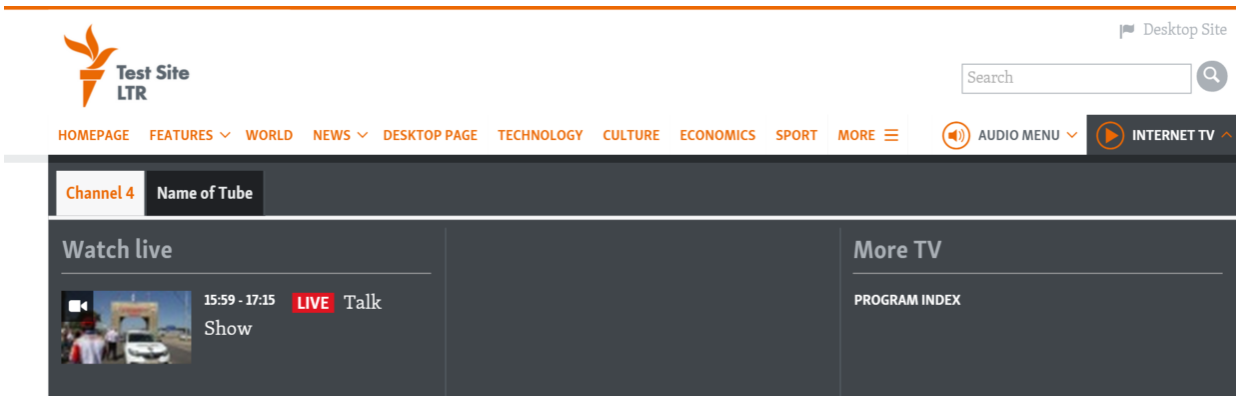

Audio Clips

When uploading audios in CMS, the option **hide links** will now be respected on the responsive site, meaning if un-selected the Download (direct link) option will be disable.

- **Multiple Tubes Video Navigation**

If website has two or three tubes, we use new layout in Video navigation, allowing the users to see all tubes (channels) available for that specific service.

- **Tealium download event for HTML5 and Flash media players**

We've extended the HTML5 and Flash player to support download events for analytical purposes

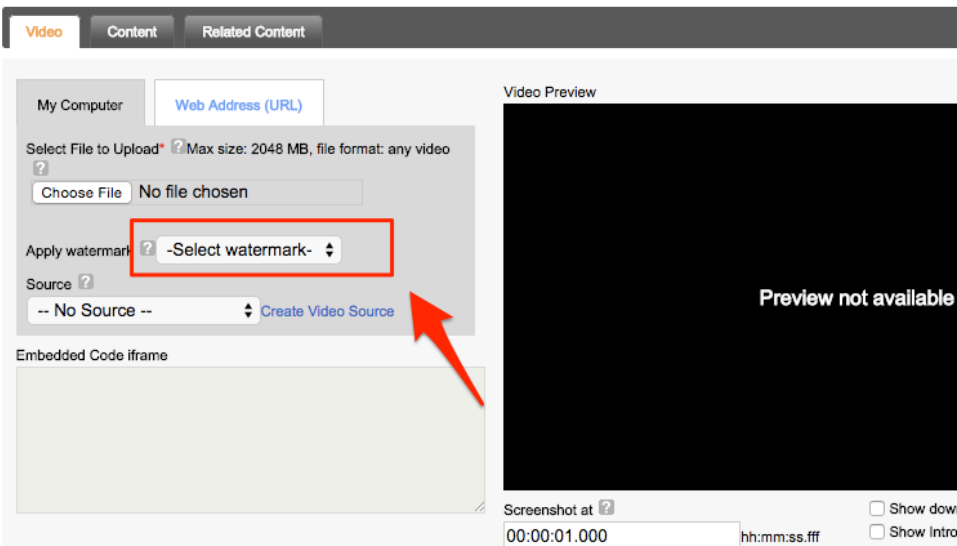

New Features – CMS & core apps

- **New watermark and video branding for RFE**

During this release our design team was working on the new branding for RFE/RL videos. Part of the scope were the new watermarks in CMS. New Watermark is available in CMS for uploaded videos. To use it, just choose watermark for the video on Video Edit Page and new watermark will be applied:

- **Slider gallery**

We are pleased to introduce a new content type in CMS called “**Slider Gallery**”. We’ve spent the last two development cycles to develop and test this new feature.

This new content type is available as any other **photo gallery layout**. To create it choose in Type of gallery option called “**Slide gallery**” as shown on the picture.

In order to create such gallery, all attached pictures have to be uploaded in the **same dimensions**.

For more info about the Slider gallery and user manual, please visit our Showcase site.

- **Facebook Open graph on responsive and desktop**

For past release cycled we also were working on more sophisticated **Open graph integration**, for Facebook and other social media. We have been working on putting all our content on the same level and providing consistent information across all the content types. We are supporting the same logic both on desktop and responsive.

For most of our content, we providing to Facebook the following: **first social media teaser information**, then **teaser information and then main title/description/photo**. If any content type doesn't have photo, we provide the appropriate logo.

- **Facebook "originally published" link to the uploaded video**

For our automated video upload to Facebook we add additional feature and now all videos are published with link to the original source, the same as we have it for YouTube.

- **Additional content types for Push Notification**

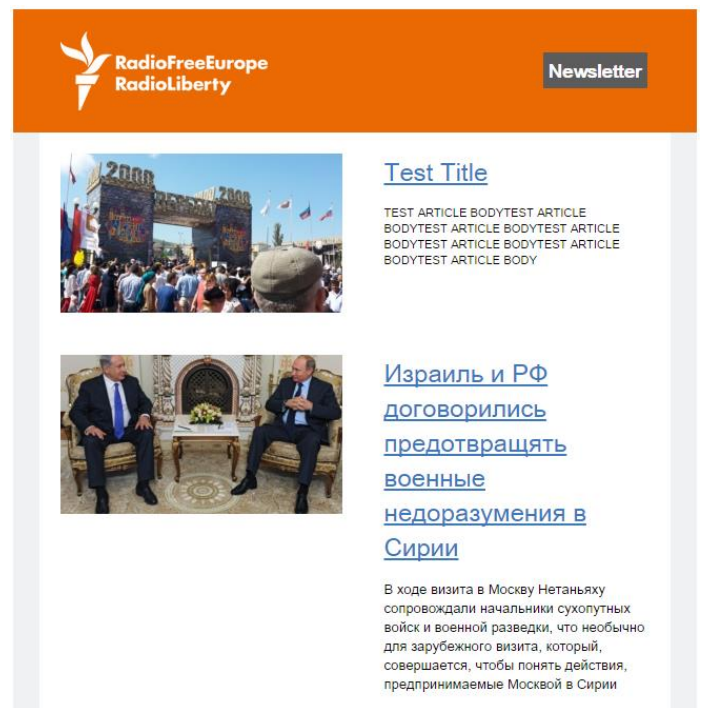

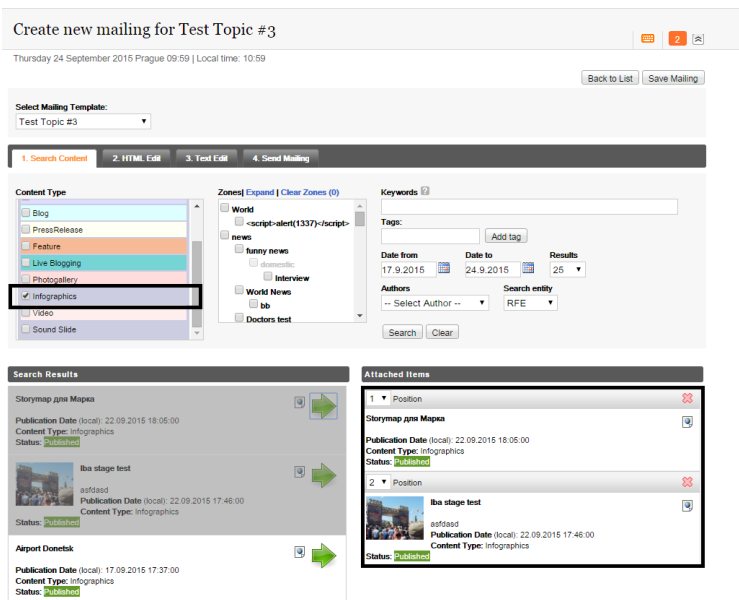

Since this Pangea code release push notifications are using all the content types which are enabled for breaking news search.

- **Infographic in Emailer**

We are pleased to announce that one of the most popular content types – **Infographic** -- has been added to the searched content list in the Emailer. Thus allows editors to promote infographics via newsletter.

Please note that audience upon clicking will be redirected to the URL where infographic is hosted, it's not possible to have interactive content replayed within Newsletter itself.

The images below show where the Infographic content has been added and preview of it in Newsletter.

Cumulative Bug Fix Report

As a part of this release, we've resolved the following reported bugs. You may not see listed your issue in case you haven't reported it via the [Pangea Help Center](#) portal. We're strongly recommending you to use this portal instead of sending emails.

Reporter	Reported	Ticket ID	Summary	Project
