Latest Pangea Release Schedule available at: http://support.pangea-cms.com

Table of Contents
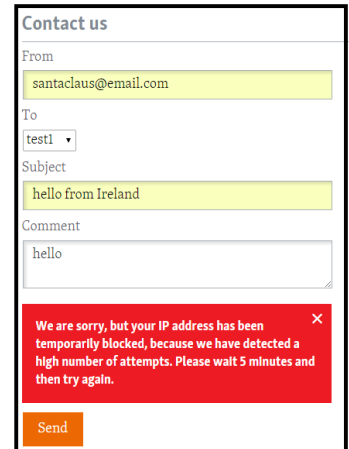

New Features – Responsive Web

- **Replace captcha by access log (contact us form)**

Because of security and usability issue we've implemented an extra protection on the Contact Us widget (based request counter and timeout security logic). Once configured count of accesses form one IP address exceeds in given period o time, the IP address will be banned for pre-configured amount of time. Please be aware that you need to localize banned message which displayed after IP address is banned with the AccessLog.ContactUs.Banned localization key.

- **Grid re-factoring, update colors, links**

Pangea Design team has reviewed all colors and links used on all the sites and adjusted them to be consistent and more noticeable.

- **SEO canonical URL**

We implementation the canonical URLs on responsive web to improve link and ranking signals for content on responsive.

- **Pinch to Zoom on iOS devices**

Since this release iOS visitor of all the Pangea responsive web sites will be able to pinch to zoom font size and content.
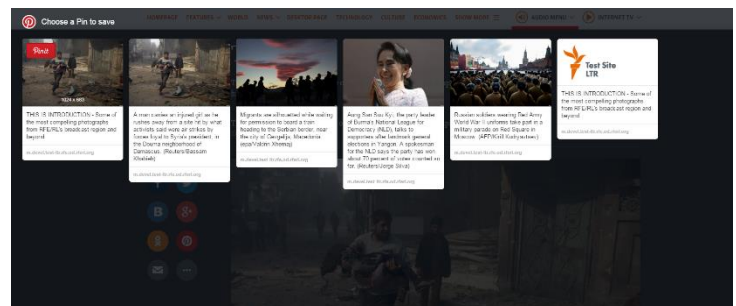

- **Video size - 16x9**

The original rule to display video covering 100% of the page width has now been changed to keep the ratio 16x9. Videos not fitting the ratio 16x9 will be adjusted by black background.
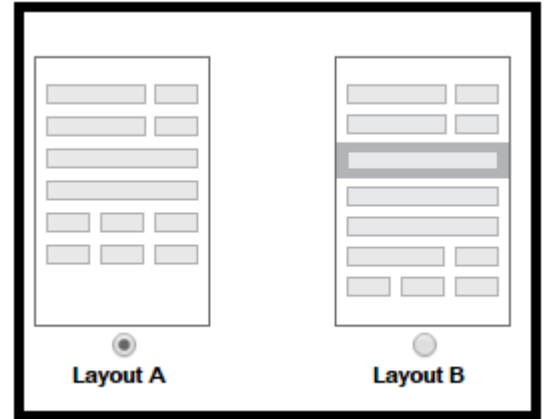

- **Share photo gallery via Pinterest**

In this release, we added possibility to share photo gallery via Pinterest. To enable it, contact our Support team via the Pangea Help Central portal.

- **Responsive section - update layouts**

We've renamed layout names in responsive sections and info pages, they used to be section and Infopage layouts. After the release please note there will be Layout A and Layout B. Then we added two rows of 1 column widgets to Layout B (Infopage layout).

- **Cross linking - will not work anymore**

We've removed any cross linking functionality, because of SEO enhancement and also it caused problems in Pangea. If you want to use content from another service, a clone is the proper way to go.

- **Mobile app deep links support**

There will be possibility to open content from web browser in native app.

New Features – CMS & core apps

Our team is focused foremost on feature migration from desktop version to the responsive version. Secondly we work on constant stability improvements and bug fixes.

- **WYIWYG CKEditor has been updated**

A new version the CKEditor brings wider browser compatibility (e.g. with Edge), new features and security improvement. Check the release notes of version 4.5.4 or the entire history since the previous version 4.4.6.26 at ckeditor.com/whatsnew.

Cumulative Bug Fix Report

As a part of this release, we've resolved the following reported 15 bugs. You may not see listed your issue in case you haven't reported it via the [Pangea Help Center](#) portal or the issue has been resolved immediately without assigning to a Pangea release.

Known Issues

- We're still working on multimedia upload via Pangea GO application on both supported platforms (iOS and Android). These issues would be resolved soon by releasing new Pangea GO versions. We'll keep you posted.

- We've received a few bug repots on random kicking out of Pangea CMS, this issue is still under investigation. As this issue is hardly reproducible, so any further detail from you would help. We'd like to ask the affected users to respond on our request for more information.
