New Features – Responsive Web Sites

• Multimedia Widget for Responsive Sections

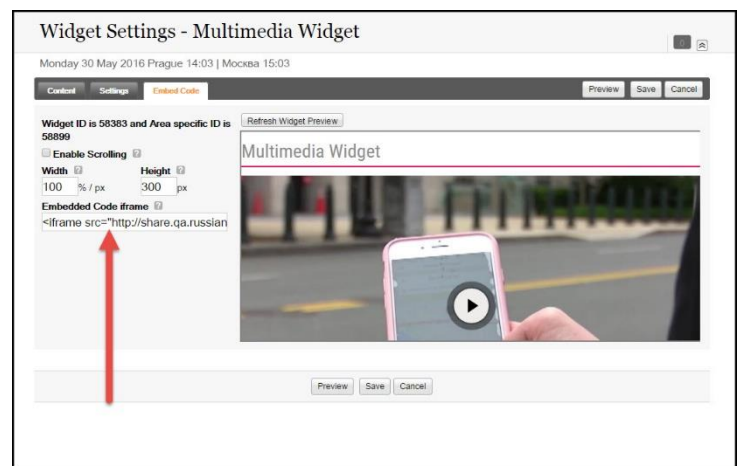

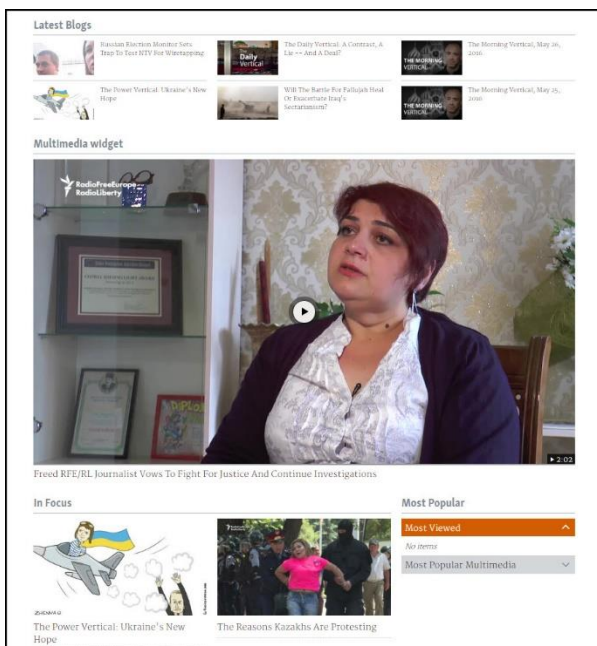

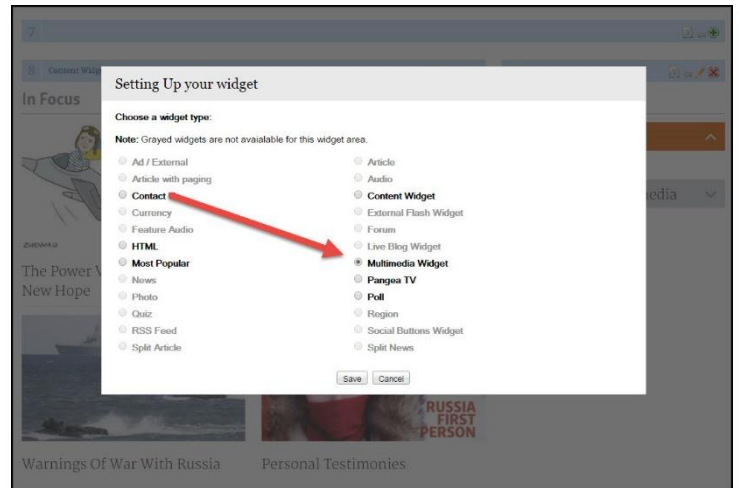

After consultation with many of the services, we have implemented the Multimedia widget for Responsive design as well. This widget enables you to place the media player directly on your section pages, where audience can play and consume your content directly, without going to the media pages.

The multimedia widget has been designed to help to present the multimedia content – Videos, Broadcast Programs, and Audio Clips. It can be used in 1 to 3 column areas, displaying introduction, Zone/Date/Label upon setting. Note that this widget is intended to display only one item, as the main purpose it to promote particular content.

The set up in Pangea CMS is similar to all the widget types – just select Multimedia widget option when creating new widget.

The setting follows the same pattern as for any other widget. Note that for fully responsive sites (sites having no longer desktop version), we have prepared the embedding option for this widget. Here you can adjust the settings, and copy the embedded code and pass it to your partner sites / affiliates:

The widget gets displayed in form of a player on your site:

• User Generated Content

This is our response on many requests, mainly from RFERL services, about missing a User Generated Content on responsive web sites. Our web users used to have such feature to send a file/ document/ picture from a page directly to Pangea CMS.

If you want to start using the User Generated Content page, please make sure keys [UGC.UploadPage](#) [UGC.UploadPage.TermsOfUseLink](#) and [UGC.UploadPage.TermsOfUseCaption](#) are properly localized. The final step is just to promote on your homepage or within a navigation link to [/userupload.html](#).

There is no change in the workflow or supported file formats, see below.

User Upload Page

Welcome to the upload page. This is where you can attach your own photographs and send them to the editors, who might just share your work with RFE/RL's readers.

Technical requirements

Allowed file formats

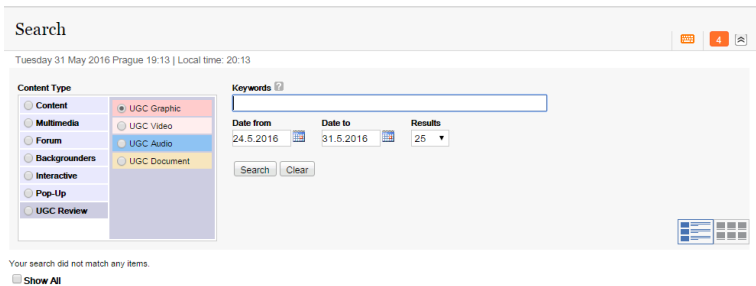

Image: JPG, JPEG, GIF, PNG, TIF, TIFF

Video: FLV, AVI, MPG, MPEG, RM, 3GP, WMV, MP4, ASF, M4V, MOV, OGV, WEBM, F4V, M2V, 3G2, MKV, DIVX, WTV, 4XA, 4XM, TS, MJP, MJ2, 265, HEVC, MXF

Audio: MP3, WMA, RA, OGG, WAV, MP4, AAC, M4A, RM, AIFF, AIF, ASE, AVR, CAF, MKA, OGG, OGA, FLAC, MID, AMR, AWB, M4R, MMF

Document: TXT, PDF

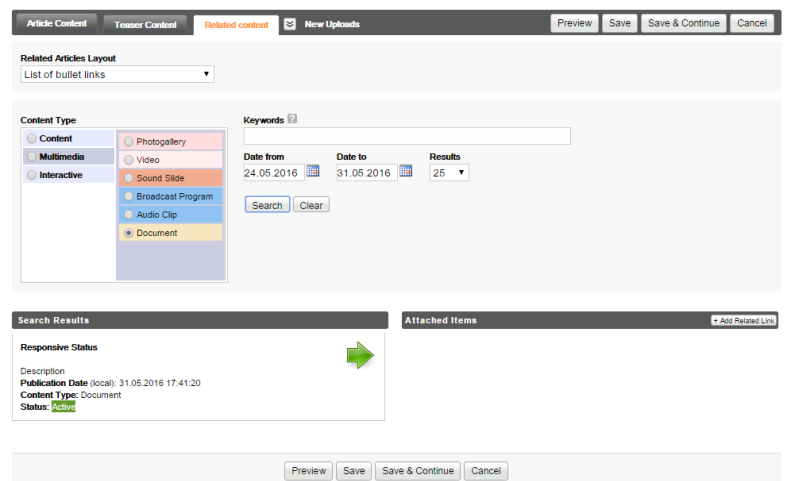

Maximum file size: 200 MB

• Responsive sites newly support the documents as part of the related content

There is possible to attach a document to a content via related content in Pangea CMS. For web users if a pdf document attached into a content, it was not clear that there is a file to download. We improved the documents and styled them to display document title and a type (pdf/txt/ppt(x)/doc(x)/xml).

See below an example how attached PDF file gets shown.

RFE/RL has obtained video footage that purportedly shows a group of Taliban commanders pledging loyalty to the newly named Afghan Taliban leader, Mullah Haibatullah Akhundzada.

The video shows a group of turbaned and bearded men declaring allegiance to Akhundzada and expressing their agreement with his appointment as the replacement for Mullah Akhtar Mansur, who was killed by a U.S. drone strike in Pakistan on May 21.

Akhundzada is not believed to appear in the video.

Experts who have reviewed the footage told RFE/RL it appears to show part of a process in which oaths of allegiance to a new Taliban leader are made across different areas without the new leader's presence.

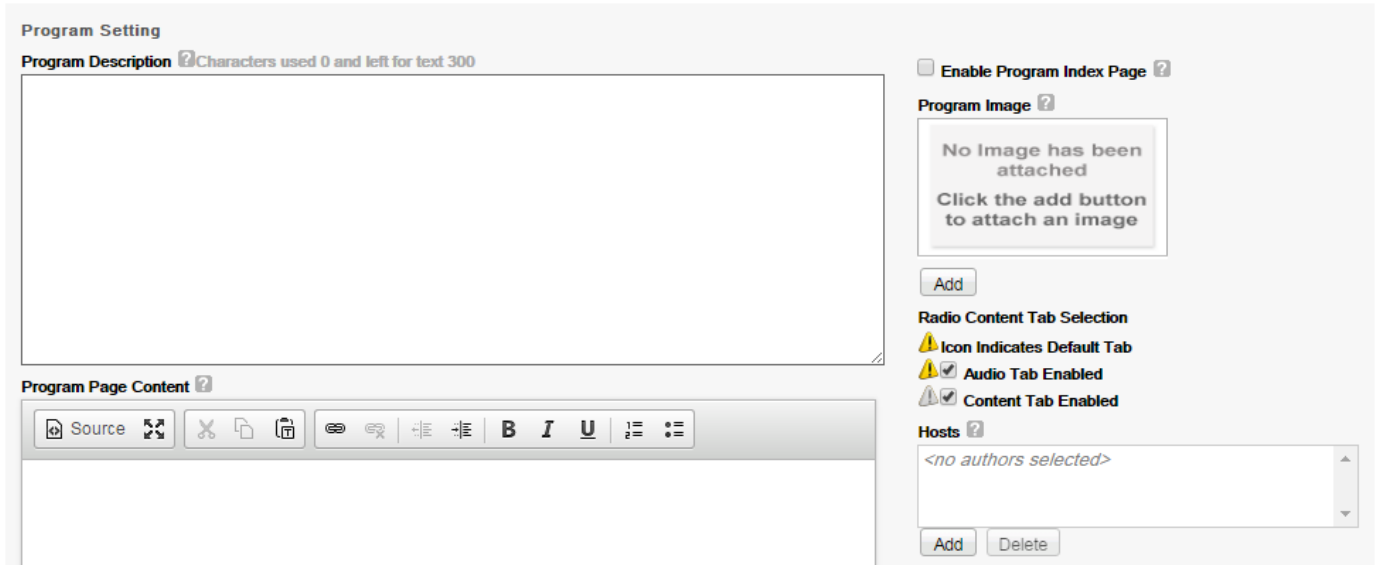

Related

[Responsive Status](#)

- **Default tab for audio zone**

As the part of the last release, we've added an article tab on an audio archive zone page and if an article was in a zone, it appeared automatically. As of version 7.10, editors can set up which tab they would like to show and which tab should be as default via zone settings in Pangea CMS (as they were used to for desktop).

- **Live adaptive streaming**

As follow up to our adaptive bitrate video on-demand feature, we bring you live adaptive streaming in 7.10. Live adaptive streaming is currently available only for sites using external PTV tubes and will be enabled after all sites have been configured properly.

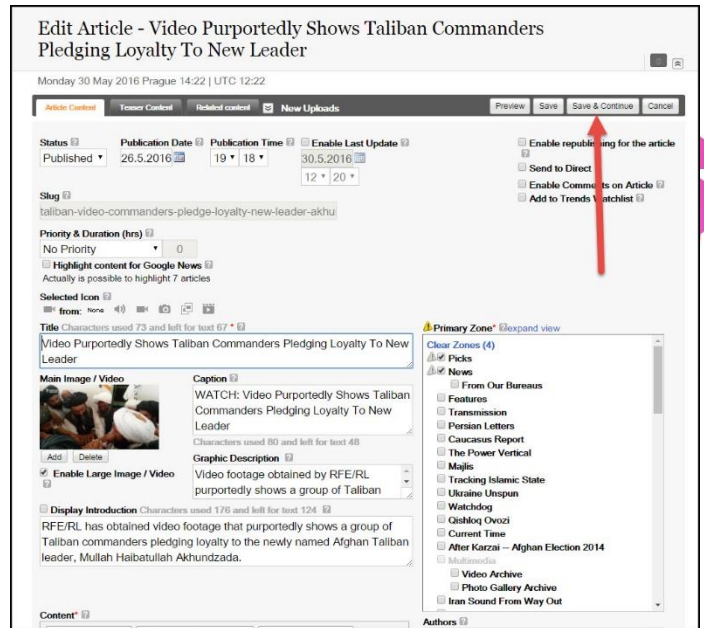

New Features – CMS & core apps

- **Save & Continue function for Articles**

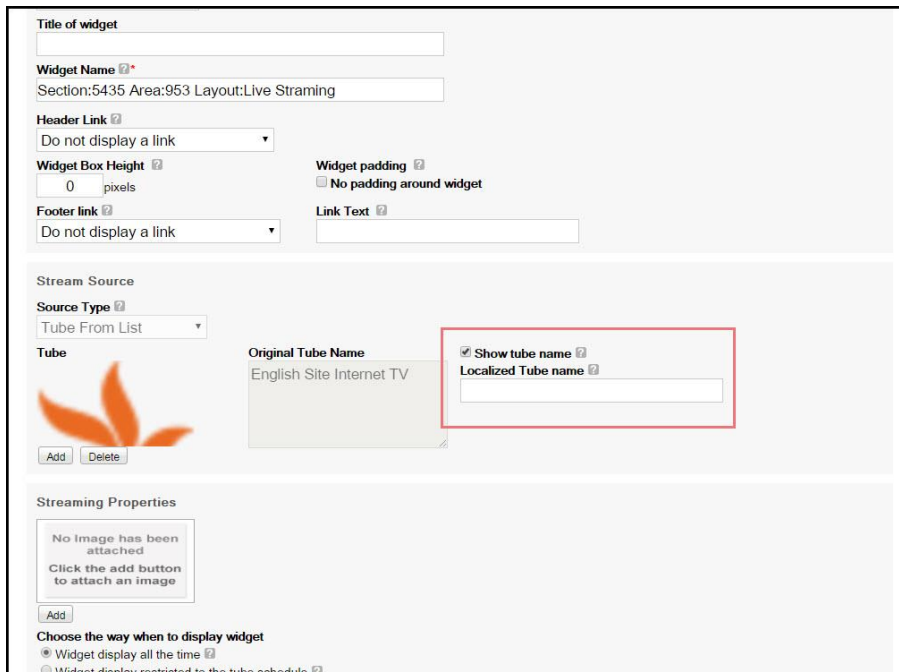

To make your work in Pangea CMS smoother, safer, and easier, we have implemented a "Save&Continue" functionality for all the text-based content: Article, Transcript, News, Blog, Press Release, Feature, and Live Blog.

Pressing this button allows you to save your work, and continue working on the Article Edit page.

- **Possibility to edit Tube name in PangeaTV widget**

Based on the feedback from you regarding the PangeaTV widget on responsive, we have implemented a solution, that allows users to either change the name of the Tube that is displayed by default on the widget level, or select the option to not display any name at all (not even the LIVE badge).

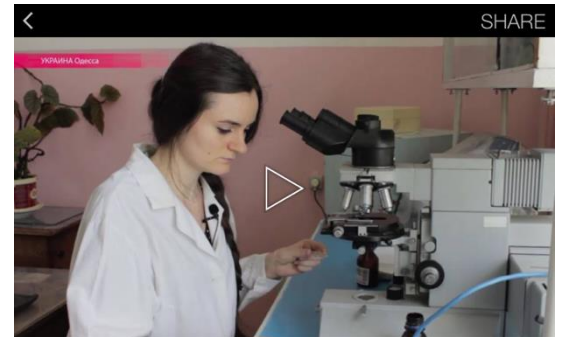

- **Facebook Instant Articles**

Pangea Digital Team is proud to announce that Pangea is now fully capable serving Facebook Instant Articles. Instant Articles allow Facebook mobile users to consume content natively inside Facebook mobile applications (iOS and Android). See more at <https://instantarticles.fb.com/>

Pilot sites helped to improve Pangea-to-Facebook communication.

Pangea Digital Team representative will call a presentation in mid of June, stay tuned.

Украинская наука рискует не дожить до ЗИМЫ

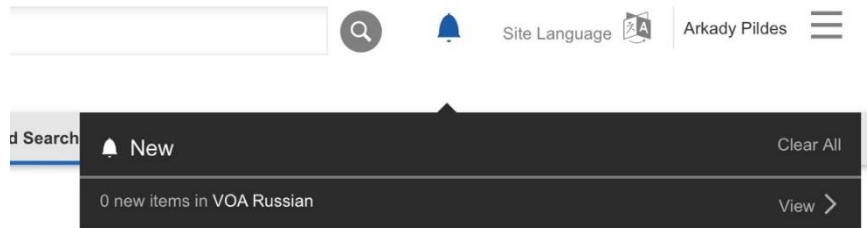

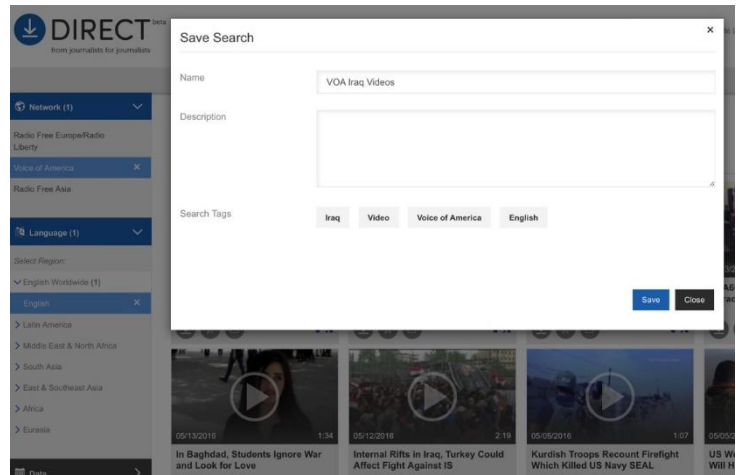

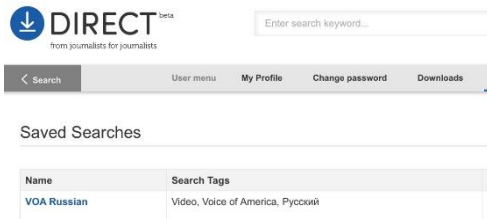

BY ВСЕВОЛОД АНАНЬЕВ
1 ИЮНЯ 2016 Г.

Украинская наука в этом году может пройти точку невозврата, за которой – только полный упадок и уничтожение. Заложенное в бюджете финансирование на четверть ниже минимальных

BBG Direct Improvements

New functionality allows BBG Direct users to save their custom searches and be notified on the site if new content matched with the search was published.

Email notifications are coming in the upcoming release.

New Keys

New keys will be ready for translation in Pangea CMS since Jun 02, to localize the keys navigate to **Settings | Site Localization**. See below the complete list of new localization keys:
