New Features – Responsive Web Sites & CMS

- **Widget Library**

In order to facilitate your work with Sections and Widgets, we are introducing a new feature called **Widget Library**. This tool will enable you to create and add your most used / favorite widgets to the library and re-use them on various sections. No need to create the same widget multiple times – by adding it to the library it will be accessible and easy to attach.

We have prepared new action buttons for the widgets: *Add from Library* for new widgets, and *Replace from Library and Add to Library* for the existing ones.

When you are adding widgets to library, please remember to specify the *Widget Library name* so the widget is easy to find.

- **Syndication tool – sharing of multimedia content**

On Desktop sites, we used to have a functionality External Audio Configurator, that allowed editors to share an embed code with parameters with RFE partners or affiliates. New Syndication tool allows now to share any live audio, live video, and latest audio or video from zone. You can also define parameters and player properties to display, like title, introduction, social buttons, etc.

Please note this feature will be temporarily disabled after the release. Pangea Digital Team needs to finalize some setup first to enable the feature. We'll keep you posted once the Syndication Tool is ready, we expect to be in the following week after the release.

- **Video distribution to Dailymotion**

Based on the demand, we have added an option to establish distribution account for videos to Dailymotion. If you want to add this distribution account, please contact our Customer Care (formerly [Pangea Help Center](#)). Also note, that there are some limits for each account set by Dailymotion, namely:

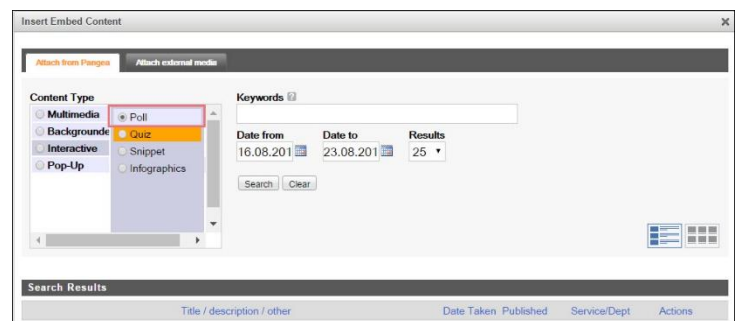

- 4 videos per hour
- 2 hours of videos (total) per day
- 60 minutes per video
- 2 GB per video

- **Attaching Poll to Articles**

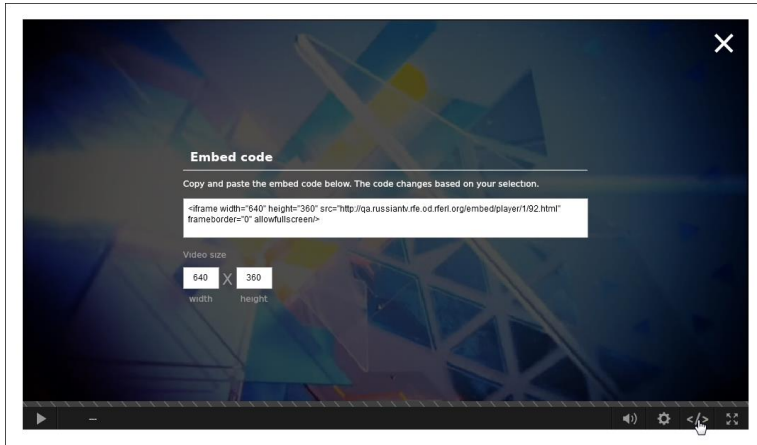

After this release, you will be able to use polls in the articles – simply by inserting via the CKEditor.

It will render inside of the article, where your viewer can vote directly without leaving the page.

- **Video and live streaming embed code sharing**

To increase sharing of video on-demand and live streaming content to 3rd party websites, we have developed the interactive embed code option for our end users. The option can be reached on media page and opened by pressing the "< / >" button on video player.

- **New simple captcha on responsive**

Based on the feedback from users that Google re-captcha is too complicated or hard to complete the challenge especially for non-English visitors, we have developed a new simple captcha and applied it to comments. Once is the captcha enabled, web users will be required to complete a simple math challenge. We've designed the math challenge to be very easy, the operands are one digit only. The new captcha is designed to be working also without JavaScript as shown on the left screenshot.

For services which have are already using captcha on comments or want to, make sure the new keys **SimpleCaptcha.*** are properly translated. In case you decided to use captcha, please submit a ticket to the [Customer Care](#).

In 2011, Bilgin Balanlı, a decorated four-star general in the Turkish Air Force, was expected to become Turkey's chief of the general staff. Instead, he was arrested, together with hundreds of other generals, admirals, and high-ranking officers. His supposed crime? Plotting to overthrow the government of then-Prime Minister Recep Tayyip Erdogan and his Justice and Development Party (AKP). Soon, the number of arrested officers from Turkey's Armed Forces reached 700.

What would you describe this site as?

- Omg so good 0 %
- The best thing ever to happen on internet 0 %
- lolalalala :) 0 %

This is an unscientific poll reflecting the opinions of the respondents only

Three years later, in 2014, Balanlı was released, together with hundreds of other officers. No credible evidence was ever presented that they were involved in any "plot." In April of this year, Turkey's highest court of appeal found that the entire indictment against the officers was based on fabricated claims and that there was no "plot" against the government.

- **Responsive Site on Secure HTTP**

As mentioned in the previous release notes, Pangea Digital Team is working on the migration to the HTTPS protocol. Let us update you on our progress.

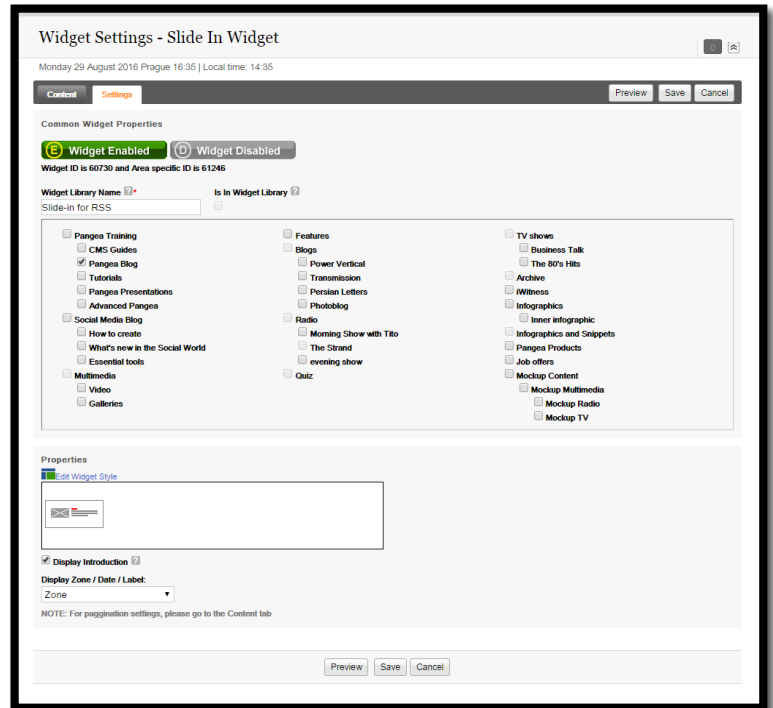

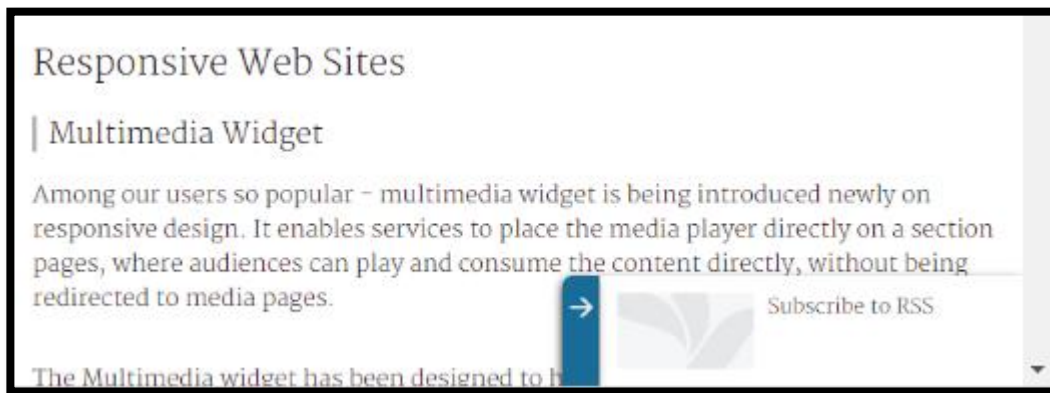

- The development work is completed for all Pangea sub-systems.
- We've put in place a process for provisioning trusted HTTPS certificates on the CDN level for all the Pangea domains. Note, we're talking about hundreds of domains.
- After this release we'll start UAT (user acceptance testing) one a non-production environment which shares the setup as production environment.
- After proper UAT, we'll start with the actual migration. It should be seamless -- any current links (http://) will be redirected to the its secured version (https://). We expect to complete the migration by the end of year 2016 as is required by the [Policy to Require Secure Connections across Federal Websites and Web Services](#).

- **Slide-in widget for promoting special content**

Slide-in widget has been developed for services to promote a special content (advertisement, RSS, special internal or external content) on article pages. If you would like to create a slide-in widget, go to Sections/ Slide-in widget and create a content widget and assign it to zone/s in Settings Tab. You can add only an item to a widget.

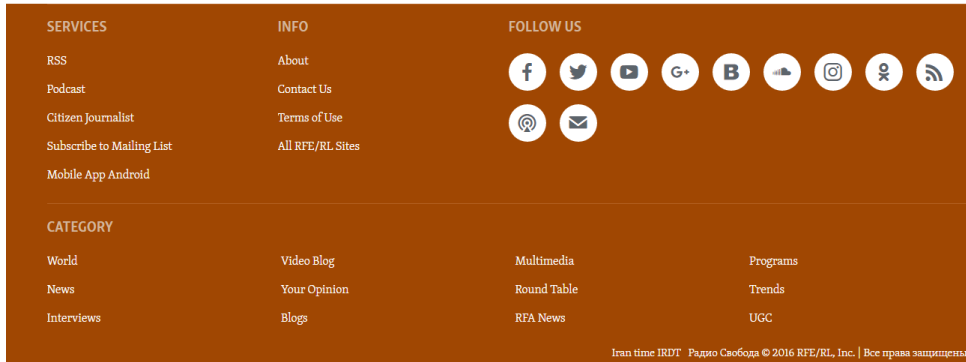

The slide-in widget is triggered on a scroll on a content page of the selected zone. If a device has a screen < 360 px (mobiles), the widget is displayed at the end of the article above the footer. Please localize a new localization key for the mobile smaller views [Widgets.SlideIn.Recommended](#).

CMS screen:**Slide-in widget on frontend on bigger screens:****Slide-in widget on smaller (mobile) screens**

- **RSS, Podcast and Email Subscribe in Follow us widget**

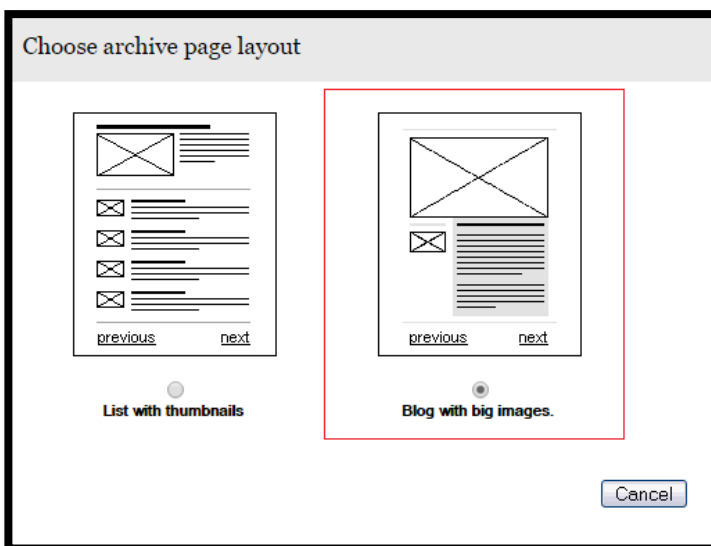

We added RSS, Podcast and Email subscribe icons to the Follow us widget. You can manage all the icons and order of the icons via [Responsive.FollowUs](#) localization key. Please, translate the icons before the use [Responsive.Social.FollowOn](#).

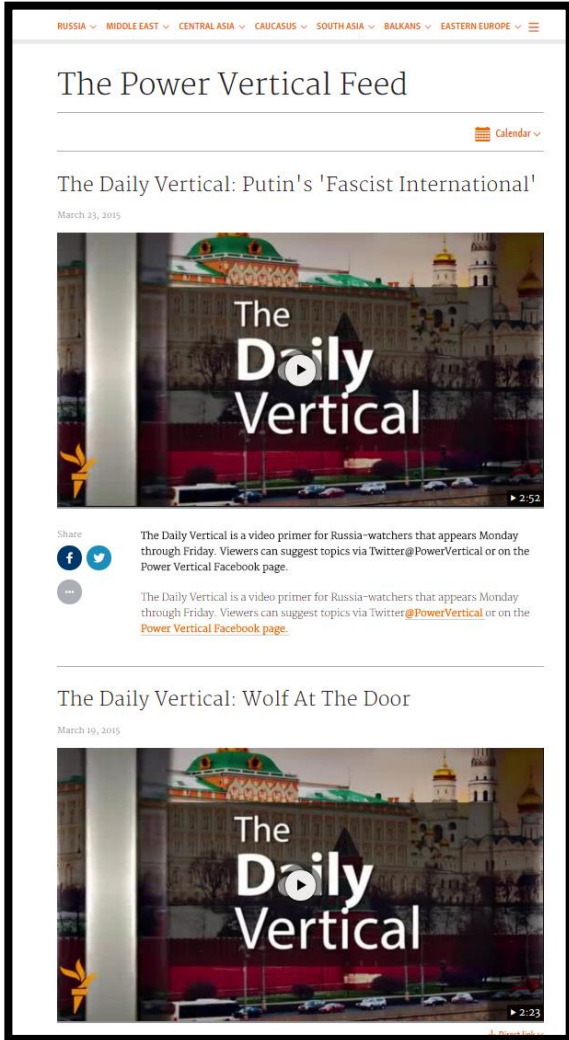

- **Special layout for content zone archive for Power Vertical show**

We have brought a new layout for zone content archive pages with open items. Before Pangea 7.12 we used to have a list layout with thumbnail for content zone archive page. As a default, we display 2 items on a zone page, but you can change the number of items by a configuration key in Pangea CMS. [Responsive.ZoneArchive.Layout.BlogType.PageSize](#). You can also change the social icons display on the archive page by [Responsive.Share.ZoneArchive.ShownIconsCount](#), we display 2 as the default.

Archive layouts in Pangea CMS:

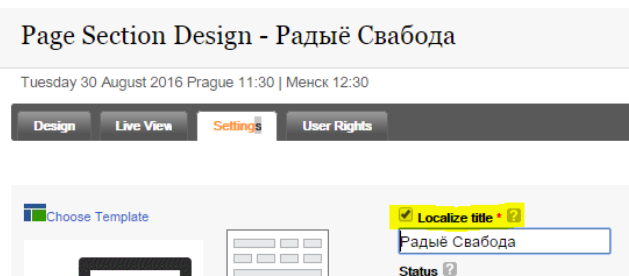

Zone content archive page with open blogs on the frontend:

- **Title in responsive section**

If an editor checks Localize title check-box, responsive section title will appear on the frontend. For legacy, we unchecked the checkboxes, so after the release of 7.12 no change on already created sections. If you want to display titles, you have to go manually to each section.

Responsive section Title in Settings in Pangea CMS:

Responsive titles on the frontend:

- **Sticky navigation on mobile**

We have implemented a sticky navigation for mobiles and removed back to top button. We display service logo, link to a search page and a main menu. We do display sticky navigation for devices with the screens 320px and bigger.

- **Time and date on frontend**

As of Pangea Release 7.12 there is possible to set up time and date on all pages which will display below the primary navigation. For Persians, we combine Gregorian and Persian calendar as it used to be on old desktop design. If you would like to activate, please change `Responsive.Common.LocalDateTimeLabel.Enabled` config key or create a ticket, we will help you. We use the same key for setting up the capital `Common.CapitalCity`.

BBG Direct Improvements

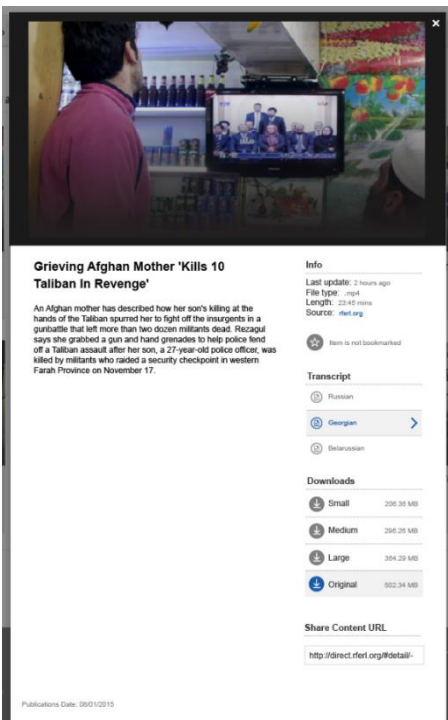

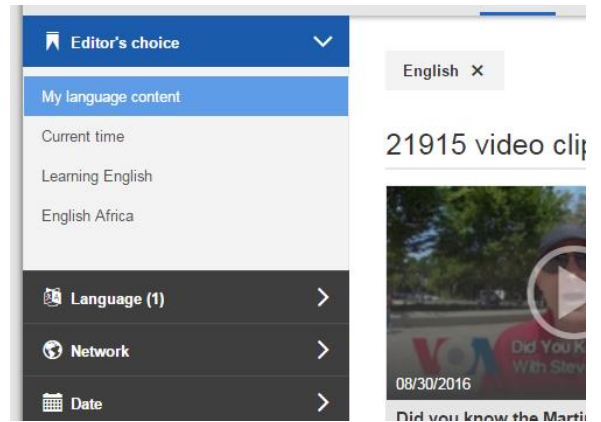

- Editors' Choice**

Editors' Choice is a new category in the left navigation. This category highlights hardly achievable categories like Learning English, Current time and English Africa. There's applied the same logic as on other search criteria so you are any time able to get rid of some search conditions and extend search results.

- Show content according to user language**

This feature is part of the enhancement mentioned above "Editors' Choice". After login the user will see as first item marked content with user language. So you will never more will need to choose your language on left navigation first to get content in user language.

- Video with transcript**

We are delivering a new feature which enables connecting video and transcript and allows editors to work with both items at one place. When you are planning to use this feature you need to go to Pangea CMS first and set connection between chosen video and related transcript (similar to article content type) and when you save this connection, information will be listed also in Direct. Connection is set easily through "related content" in CMS. So doesn't matter if you are right now in CMS transcript and you set as related content needed video or opposite, in both ways you will get it into Direct (proper Direct Zones are condition). When you are working in Direct you can find as first transcript and also there you will see that transcript has video, so you can simply click on it and modal pop up window will be changed from transcript into video modal pop up window.

- **Exporting of users into CSV file**

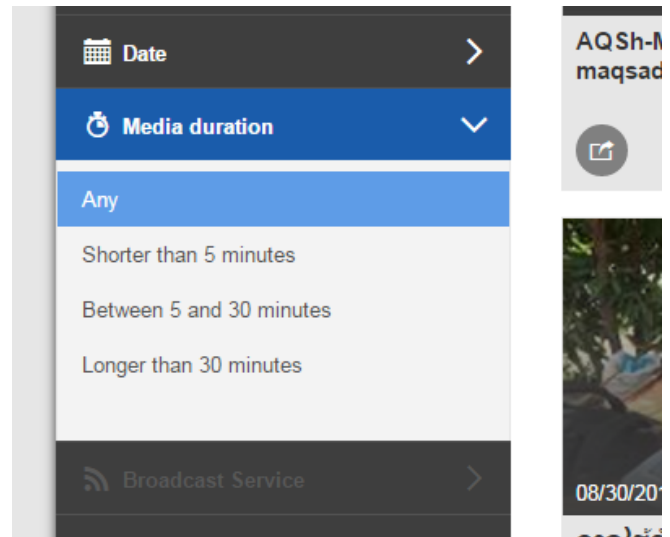

There was added a new feature in user management section to download filtered list of users from Direct and as a CSV file. This file can be then used for emailer or any marketing needs.

- **Terms of use localized**

To bring our policy closer to our affiliates we have developed way how to display localized version of Terms of use even if they are not valid because the only valid are in English. We will start asking services to localize Terms of use and finalize them together because of html parameters inside of them which can broke text order. User will be able to see them while is registering into Direct and will click on link to read terms. As first will registrant get localized version if exist, if not English is by default every time.

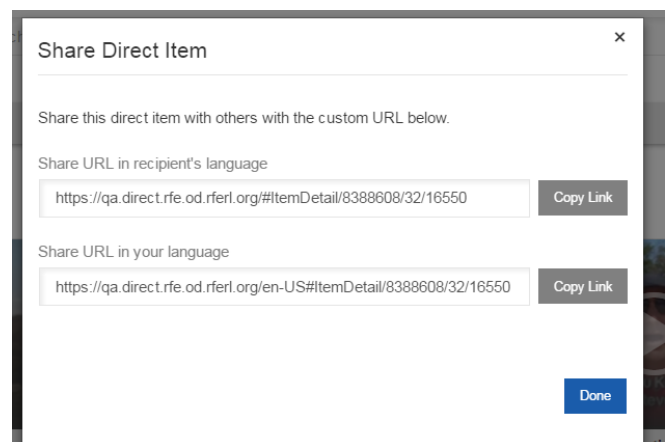

- **Media duration**

Left navigation is now offering way how to specify search criteria for duration by video and audio files. This filter will make easier way how to find short programs or whole episodes without long listing.

- **Share link localization**

You were able to share content in language which was set by recipient user account now you can share content with forced localization from your setup. While you are sharing you can choose from two types.

- **HTTPS protocol**

Similarly, as our responsive websites, BBG Direct is on our roadmap to be migrated under HTTPS protocol. The migration will be seamless -- end users won't notice any change except a green lock icon in the address bar. We expect to happen within upcoming weeks.

New Localization Keys

New keys are ready for translation in Pangea CMS as of Aug 31, to localize the keys navigate to **Settings | Site Localization**. See below the complete list of new localization keys:
