Latest Pangea Release Schedule available at: http://support.pangea-cms.com

Table of Contents

New Features – Responsive Web

- **Show duration on audio/video files**

As of Pangea 7.05 the total length of audio/ video gets shown in the right bottom corner in the player. This should help visitors to decide whether they want to watch it (based on mobile data) or not. Please note the duration gets displayed only for audio/ video on demand.

- **Size of audio/ video on media page**

For the same reason as above -- specially for our audience on mobile devices -- we're displaying now also the physical size of the file next to the "Direct link". This applies for any downloadable multimedia items on a media page.

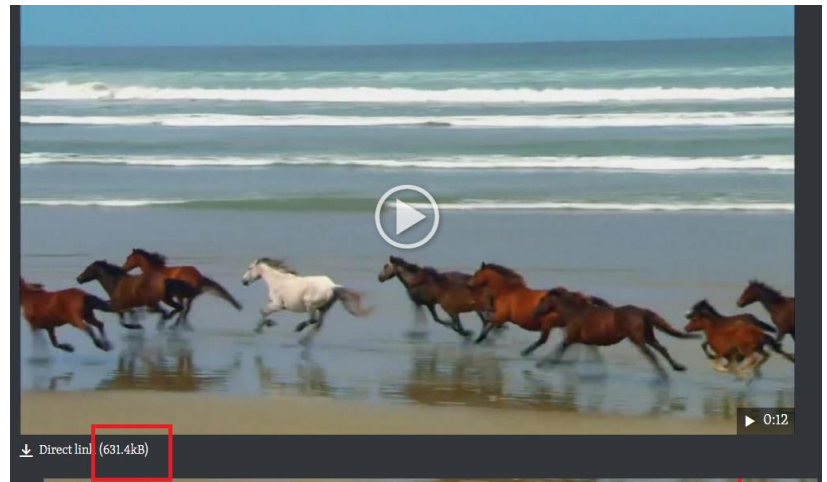

- **Photo-gallery body content - Show More**

In case Content in a Photo-gallery item is entered, there will be shown only the first sentence on the Responsive Photo-gallery page together with "Show more ∨ " link showing the full text. Note that the Photo-galleries can now be promoted with rich formatting.

All about Obama

Barack Hussein Obama II (US Listeni/bəˈrɑːk huːˈseɪn əˈbɑːmə/; born August 4, 1961) is the 44th and current President of the United States, and the first African American to hold the office. Born in Honolulu, Hawaii, Obama is a graduate of Columbia University and Harvard Law School, where he served as president of the Harvard Law Review.

The inauguration of Barack Obama as the 44th President took place on January 20, 2009. In h...

- **"Back to the top" floating navigation**

When scrolling a page, we understand that it might be sometimes hard to get to top fast via mobile device. This issue has been addressed by implementing by a floating navigation element "Back to Top" appearing in the bottom right corner of the page. Don't forget to localize key [MobileSite.BackToTop], please.
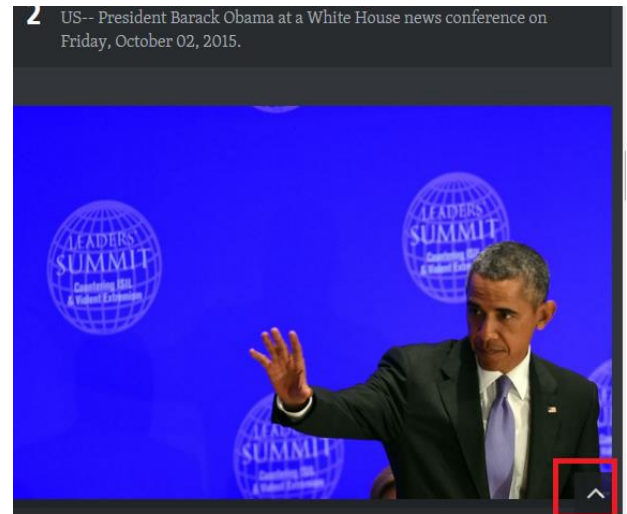

- **Podcast / RSS Page**

Yet another missing page from Desktop version has been added now to the Responsive -- Podcast and RSS. As usual as this is a new page, it contains a few new localizations requiring translation, please check [Responsive.RssPage.*] localization keys in Pangea CMS | Settings | Site Localization.

- **Responsive Info pages**

Note that any Section with the Responsive Info Pages layout are now grouped under a new menu item "Responsive Infopages"

- **New social network for responsive:**

We're proud to announce an extended support for new social networks. Pangea 7.05 newly supports the following social networks on responsive webs:

- Mail.ru
- Balatarin
- Meneame
- Reddit
- Odnoklassniki

Also newly the "Follow us" widget supports Odnoklassniki network. If you want to set it up, feel free to contact our support team via our Pangea Help Center portal.

- **Links to Program Index page from media page**

Looking back, we had only possibility to display/ or not links to TV and radio programs at media pages. Now it is possible to set up whether to have only TV or Radio programs displayed.

New Features – CMS & core apps

- **Email this article** – we're following the same approach in sharing an article via email as implemented on the responsive web. Instead of complicated text fields where user had to fill email, subject, body and pass CAPTCHA challenge, there's a link which opens client's mail client with prefilled mail body.
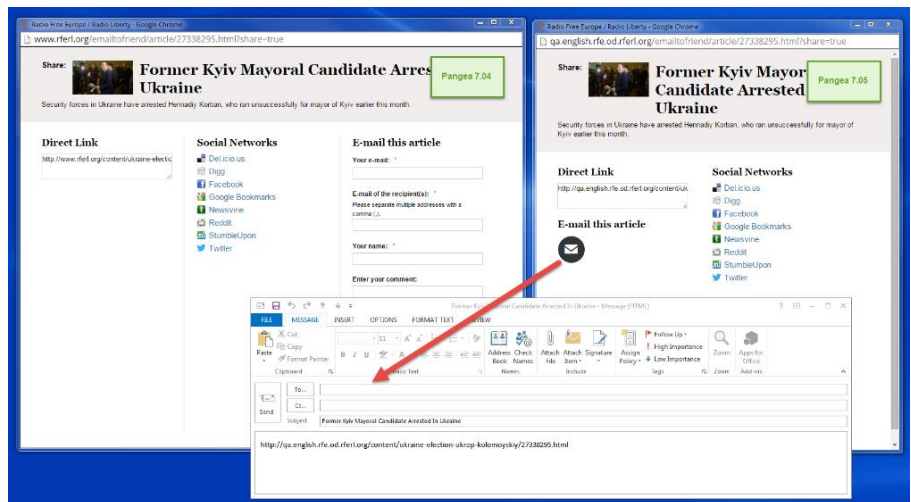

- **Email from Contact us form** – we've slightly changed the format of the email by the Contact Us widget:
  - Sender to noreply@rferl.org
  - Subject to "*Pangea Contact Us Widget*"
  - Added text "*Somebody is trying to reach you via Pangea Contact Us widget. Please reply to: <*email from the form>" to body of email.

Pangea MAM -- introduction

As you may know, Pangea Team has been working on this project for some months. The project have reached now a level of maturity so it's ready to be introduced and implemented. **Pangea MAM** is a **Multimedia Asset Management**, a tool for Video Producers that would allow them to organize files and metadata all in one place. It is very collaborative, where assets can be shared, edited, cropped and repackaged. Producers can also add notation and organize for the final production.
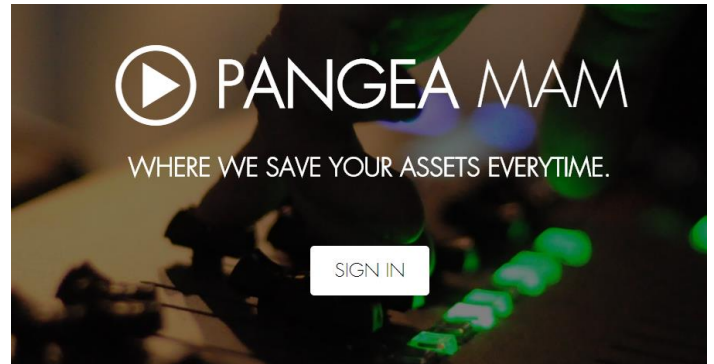

Major MAM features:

- Fully responsive web Interface is accessible anywhere from any device, Mobile, Tablet and PC.
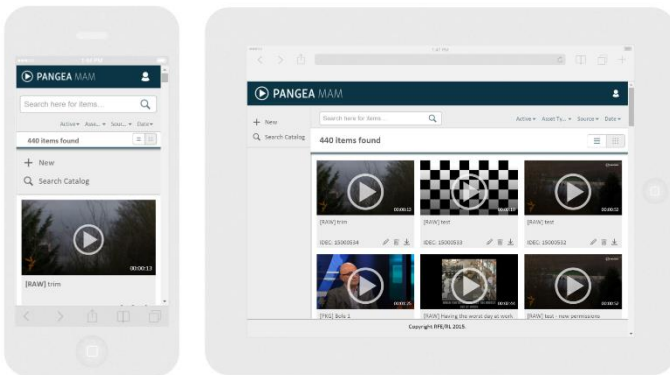

- All video files at the tip of your fingers, just type it and you'll find it. Pangea MAM also supports all BBG Languages.

- Basic Video editing and notation to never forget a good shot.
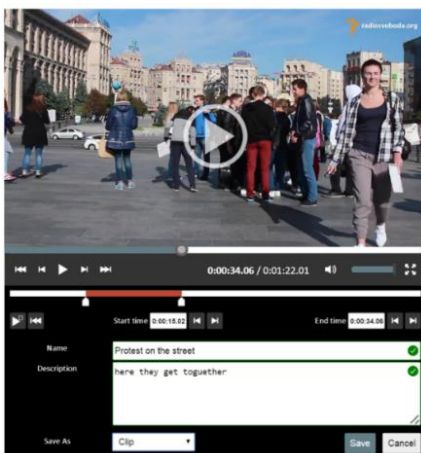

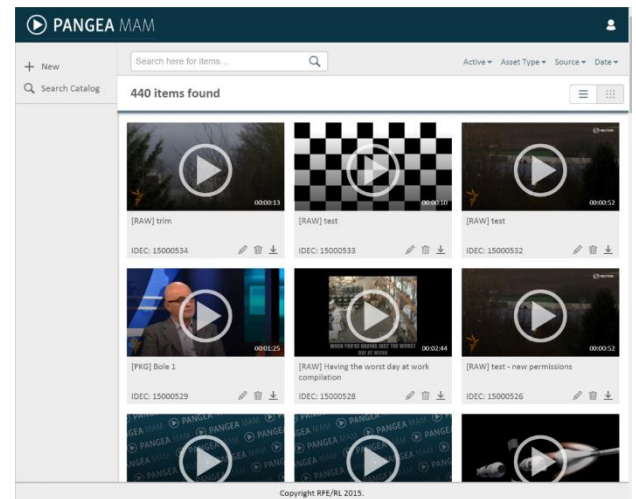

- Frame Accurate Player and with support of Adobe Premiere Shortcuts.

And much more. Please stay tuned for our Pangea Presentation coming up in the following weeks where we will be presenting Pangea MAM in more detail.
